

A15/81 Dissolved Sulfide monitor

Project: Supply and installation of dissolved H₂S monitors

Location: Huddersfield, UK

Project Summary

Britvic's Huddersfield factory is a water bottling facility operating two boreholes, one classified as spring water and the other as mineral water. The site houses two high speed water bottling production lines operating 24 hours per day over six days per week. The project involved the supply and installation of H₂S monitors that would enable accurate measurement as well as compliance with strict legislation.

- Project Scope
- Supply of monitors
- Install of panels
- Calibration and commissioning
- Training

Added Value/Benefits

Since implementing the monitors, Britvic has been able to ensure that its bottled products are accurately and continuously monitored for hydrogen sulphide. The company has achieved this goal while also ensuring that costs and maintenance are kept to a minimum and reliable results are generated in real time.
